

The diagram illustrates a fire alarm system layout. A horizontal black line represents the main alarm line, starting from a 'panel' on the left and ending with a wavy line on the right. A red line, representing the sprinkler system, branches off from the black line. This red line has two vertical black segments, each connected to a 'pull station' (represented by a white square). The red line continues to the right, ending in a wavy line. The label 'sprinkler tree' is placed near the end of the red line.

Low cost fire alarm circuit
